

Company Overview

Saronic Technologies is a defense technology company that designs and manufactures intelligent Autonomous Surface Vessels (ASVs). In an increasingly complex and competitive global security environment, Saronic is on a mission to protect our way of life by integrating ASVs into traditional naval and maritime fleets, enabling them to go farther and do more with less risk to life and mission.

Saronic is developing a growing family of ASVs, which includes Spyglass – a 6-foot vessel – and Cutlass – a 14-foot vessel. With world-class hardware, software, and manufacturing teams working side-by-side, Saronic offers vertically integrated ASVs that are highly mission-capable, interoperable with government and commercial systems, and scalable to meet strategic Fleet requirements.
